

# Java Performance Tuning Workshop

## Exercise 14:

### Tuning TipsDB

---

Purpose: To perform an end to end tuning of the web application Tips.

Performance Goal: Should meet the domain experts expectations

You should work together in small groups (2-3) to tune Tips. Use one machine to run Apache JMeter and another to run the database on server. You may need to interact with the domain expert for any questions that remain open after reading these instructions.

You are allowed to make any changes you feel are necessary to improve the performance of the application. Tools that you may find useful include;

- \* VisualVM
- \* Servlet Timing Filter
- \* MXBeans that maybe useful
- \* Censum
